Q1:

Knowledge Management is useful for making decisions so that you won't make decisions blind.

It also makes storing and retrieving of data fast

Makes is also systematic for better business processes.

The innovation rate is increased since the people are communicating it helps them to have a better plan or idea on how to approach certain things.

Helps the company to grow in a faster rate and keep things on track.

Q2:

By having your information categorized and organized it is easier to use it in knowledge management the time for you to decide will be lessened since the process of it is already properly managed

Q3:

People knowledge is very important in knowledge management since different people have different approach or ideas, it will make things more productive since they can show their skills and capabilities.

Q4:

Tacit knowledge for be is more valuable since your own personal experience is something that most people can't replicate and that costs money. An experienced man can solve and innovate hard problems and systems. New experienced people can help the company to be in a better spot in making critical decisions.

Q5:

Management Organization, they serve as the standard of things and sets it as a sharing of knowledge to meet its goals.

Infrastructure needs to have an effective technology to have an efficient output.

People and culture, having a tacit knowledge from different cultures is a good thing it helps in brainstorming and can have a new type of idea.

Content Management Systems, having new information created could help the business greatly and gives updates about the information.

Q6:

A man with tacit knowledge is very good in computers by having a computer he can have new programs or apps that are appropriate with the company with his experience he can know what the company really needs since he already met that kind of problem before.
